Version Nov 2022

The gateway to more efficiency.

The small and quickly adjustable Diana Easypacker enables folding cartons to be packed semiautomatically in shipping boxes. It supports manual packing and thus increases ergonomics and performance. Thanks to the easy operation and handling, the operators easily pick up the cardboard boxes coming from the folding carton gluer in a shingled flow and place them in the shipping boxes.

The machine can also be upgraded with an ergonomically designed packing table for more efficient packing. The counting pulses displayed on the gluer enable the exact quantity of folding cartons to be taken out.

Thanks to its automation and flexibility, the Diana Easypacker can increase the packing capacity by up to 50% compared to purely manual packing of folding cartons. It performs perfectly up to a speed of 70,000 folding cartons per hour and can be operated in parallel by 2 employees in case of high-performance requirements.
